

LIST OF FIGURES

FIGURE NO.	TITLE	PAGE NO.
2.1	Sample Data Images	6
2.2	Pervasiveness of vitamin deficiencies in an urban adult population	6
2.3	Architecture of the system	8
2.4	Upload vitamins range page	9
2.5	Food recommendation page	9
2.6	Architecture of the system	12
3.1	Machine Learning Algorithms	16
3.2	Working of Random Forest	17
3.3	Structure of Decision Tree	18
3.4	Flow Chart of Naïve Bayes Classifier	19
3.5	Naïve Bayes Classifier	20
3.6	Class Diagram	20
3.7	Use Case Diagram	21
3.8	Collaboration Diagram	21
3.9	Sequence Diagram	22
3.10	Stepwise Implementation	29

LIST OF RESULTS

SCREENSHOT NO	SCREENSHOT NAME	PAGE NO
Screenshot 4.1	Enter the name of patient	48
Screenshot 4.2	Select the symptoms	48
Screenshot 4.3	From the above figure for given symptoms it predicted Common cold by using Decision Tree	49
Screenshot 4.4	For Random Forest for the given symptoms it predicted Gastroenteritis	49
Screenshot 4.5	For Naïve Bayes also for the given symptoms it is predicted as Gastroenteritis	50

ABSTRACT

In this digital world, most of the people are prone to diseases, due to lack of healthy food, proper sleep and daily exercise. It is very crucial to know if we are suffering from a disease, at an early stage rather than discovering it at a later stage. Hence disease prediction system plays an important role as it predicts the diseases based on symptoms. This disease prediction system uses Machine Learning algorithm named Naïve Bayes , Random Forest , Decision Tree.
